

PEOPLE WITH DIABETES

**STOP
FINGER
PRICKS**

Volunteer to help.

*** This study will not require diabetics to stop their current method of monitoring blood sugar levels.**

Women with Type I, Type II or Gestational Diabetes are needed for blood glucose (sugar) research study.

Research is now underway to develop a noninvasive meter for measuring blood sugar levels by shining a beam of light into the finger. This technology is investigational and we are looking for volunteers to participate in this research study. The study will require multiple appointments. Finger blood samples will also be collected at each visit.

Volunteers must be between 20 and 50 years of age.
Volunteers will be reimbursed for their time and inconvenience.
