

A CLINICAL RESEARCH TRIAL FOR MS SPASTICITY

DOES IT FEEL LIKE SPASTICITY IS CONTROLLING YOU?

ACT NOW. ASK NOW.

The Command Clinical Research Trial is currently evaluating the safety and effectiveness of an investigational oral medication that is similar to a currently approved medication, baclofen. The study medication is being evaluated to determine whether it is effective at treating spasticity with twice-daily dosing.

If you have spasticity due to MS, you may be eligible for the Command Clinical Research Trial.

Participants will receive (at no cost):

- Study-related exams and evaluations with an MS Specialist
- Laboratory testing
- Study medication

Plus, you will be reasonably compensated for time and travel.
